Work Experience

Solution Architect | Technical Manager

2020 - Today

SparkCognition | Bengaluru

I have been working as a solution architect at SparkCognition since 2020.

- Delivered end to end solution to create no code mobile applications which are live with complex use cases in Sweden and the US.
- Delivered a logistics solutions consisting of 6 mobile apps to facilitate the goods delivery at a leading logistics company. The solution is live in Norway, Denmark and Finland
- Delivered a mobile based AI product POC for leading automobile companies in US which uses the ML capabilities using TFLite models to run effectively on mobile devices to run detections, classifications and take preventive actions in case of violations.

I worked with the different teams to create the architecture of these solutions, manage the development, sprints and backlogs along with feature prioritization using Jira.

Worked on RFPs and SOPs for our projects and conducted Demos and POCs for customers

Team Lead | Android

2017-2020

SparkCognition | Bengaluru

Worked as a team lead for the android development team at the organization.

Lead the team into technical development and worked with other teams to manage the resources on different projects.

Led the project review sessions to understand the performance of the teams and figure out solution to technical problems.

Led code review sessions and made sure that good practices are followed while using the version control systems (GIT, SVN) for source code management

Android Developer

2015

Aguai Solutions | Bengaluru

Worked as a developer to work on 2 connected mobile applications from scratch. The applications worked as components in a connected healthcare solution. A user could set medication reminders, order medicines online while the other app was for the pharmacies to manage orders.

Worked on an app for doctors to prescribe on a pad and it would convert everything to a prescription image on android.

So a patient could go to a doctor, doctor would write a prescription. Based on the prescription, the medication reminders will be set and the medicines will be ordered using the app automatically (if user wants).

Certifications

- Google certified android Developer
- Certified Scrum Product Owner from Scrum Alliance
